## Getting to Know Your Camcorder

### Overview

The camcorder is equipped with a 5 Mega Pixel sensor that can take H.264 format videos. The H.264 technology allows for extended video recording with less memory. High quality images up to 16 megapixels can also be delivered smoothly. With a color LCD monitor, you can view and examine the videos and photos easily.

The 3" LCD touch panel is an ideal platform for you to operate your camcorder. The menu options are accessible with your fingers. With the touch panel, you can select the options directly and quickly.

The camcorder also features video recording at an HD resolution of 1920x1080. You can also connect it to an HDTV via an HDMI cable, and easily playback the recorded high-definition videos on the wide screen HDTV.

Moreover, the camcorder has an advanced uploading feature. With the exclusive built-in **Internet Direct** application, you can upload the videos captured by the camcorder to the web site more effortlessly .

ISO sensitivity and color balance can either be adjusted automatically or changed manually. A 16x digital zoom helps you to control over the videos and photos you take.

The varied effect options, such as Time Lapse and Slow Motion, make recording more fun.

The built-in memory allows you to take photos and to record videos without a memory card. The memory card slot allows users to increase the storage capacity.

#### Note

- Partial memory of the built-in memory is used for the camcorder's Firmware code and software.

#### Information

- H.264 is the latest video compression format and used commonly for HD video recording. The H.264 technology uses a high compression rate to convert digital video into a format that takes less capacity and maintains high video quality. By compressing video into smaller size , you can take more videos and photos.
- Please install the bundled ArcSoft MediaImpression application on the CD. This application contains the H.264 Codec (ffdshow-a free software under GPL license) for viewing the AVI (H.264) videos correctly on your PC. The ArcSoft MediaImpression application is compatible with Windows based systems only.

# Getting Started

### Loading the Battery

Before using the camcorder, you must load the supplied Lithium-ion rechargeable battery.

1. Insert the battery according to the correct polarity marks ( + or -).
2. Close the battery cover firmly.

#### CAUTION

*RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS .*

### Charge your battery

You must use the supplied AC charger or the USB cable.

The camcorder must be turned OFF; blinking light confirms charging, and the light becomes constant when the charging has been completed.

In AC charging Mode, the light will turn itself off automatically after 3~5 minutes . The full charge time is about 3.5 to 4.5 hours. (Actual charging time may vary. It depends on the battery conditions.)

### Inserting and Removing an SD Card (Optional)

The camcorder comes with an internal memory which allows you to store photos and videos. You can expand the memory capacity by using an optional SD memory card.

1. Insert the memory card into the slot. Please refer to the figure on the right side.
2. To remove an installed SD card, press the card inwards to release it.
3. When the card pops out, gently remove it from its slot.
4. Recommended memory capacity: 1GB or above.

#### Note

- When a memory card is fitted, videos/photos are saved on the card rather than on the built-in memory.
- *Protecting Data on an SD Card: SD Card is read-only when it is locked. No photos or videos can be recorded when the SD card is locked. Make sure the lock is on the writeable position before recording any media.*

# Viewing Video & Photo on PC

### Installing Bundled Software

The CD-ROM supplied with this camcorder contains 2 pieces of software.

- **ArcSoft MediaImpression** is a user-friendly application that helps you managing your media, burning your video into DVD, and uploading your files to the web sites easily.
- **Adobe Reader** is a popular program that you need to have installed to read the User's Manual. Many computer users will find they already have this software installed on their computer.

To install the bundled software:

1. Insert the CD-ROM into your computer's CD-ROM drive. The autorun screen appears.
2. Click "**Install ArcSoft MediaImpression**". Follow the on-screen instructions to complete the installation.

#### Note

- Detailed information can be found in the online help of all the bundled software.
- Install the bundled software application, ArcSoft MediaImpression, for viewing the video correctly on a PC.

### Transferring Photos or Videos to a Computer

You can transfer photos or videos stored on your camcorder to a computer and send them in e-mails to friends or post them on the web sites.

To do this you should:

1. Connect the computer and camcorder with the supplied mini USB 2.0 cable. .
2. The videos and photos can be found on your computer at "My Computer\Removable Disk\DCIM\100MEDIA". (On the SD card in the camcorder)
3. Under this folder, you can view, delete, move, or copy any video/photo you want.

#### DISCLAIMER

- Mac users need to download a third party software in order to view AVI video files. Quick Time (Mac) does not read video files in AVI format.

# Troubleshooting

### Troubleshooting

**1. If the LCD preview is not clear while shooting, how can the focus be adjusted?**

Try to switch between Macro and Normal Mode.

**2. The files on the memory card do not display smoothly when the LCD shows the “!” marking.**

The “!” means the SD card is low speed or it has the wrong content inside. The way to solve this condition is to format SD card through the camcorder instead of a PC (Please refer to the detailed Format instruction in User's Manual-Section 5).

Or please change the SD/SDHC/SDXC card to a high speed one.

**3. Why do some of my indoor photos look blurry and dark?**

The camcorder extends photo exposure time under low light/ indoor condition. Keep the camcorder (and the target subject) steady for several seconds when taking photos. The shutter will sound when photo is being taken.

**4. How do I charge battery?**

You must use the supplied AC charger and the USB cable. The camcorder must be turned OFF. A blinking light will indicate active charging and a solid light indicates that charging is complete. In AC charging mode, the full charging time is about 3.5- 4.5 hours and the light will turn off automatically after 3~5 minutes. (Actual charging time may vary. It depends on the battery condition.)

**5. After connecting the USB cable to the computer:**

1. The disk [DV] indicates the internal memory of the camcorder. (The disk label may be different according to different model and PC OS.)
2. [Removable Disk] indicates the external memory. (If the SD card is in the camcorder.)
3. The disk [DVAP] indicates the built-in Internet Direct application is saved at this disk. Please DO NOT format this disk or delete the application inside; otherwise, the Internet Direct application cannot function.
